Looking into a career outside of academia? Consider using your vast analytical skills to become a data scientist, for science and non-science companies alike!

Dr. DuPuis, a graduate of the Huck Institute for the Life Sciences, will discuss what he has done as a data scientist, what skills he utilizes, and the path he took to get a job as a data scientist.

Dr. DuPuis obtained his PhD in Neuroscience in 2013, in the lab of Dr. Gatzke-Kopp where he used various data analysis methodologies to assess error related negativity and behavioral variability in children. After graduation, he was a manager of analytical insights at MarketShare, where he built analytical models to assess the impact of marketing efforts. He now is a data scientist at ScribbleLive in NYC, where he works with the management and production team to determine the value of their software.
